INDEX

Acebutolol, effect on cerebral blood flow 79
Acetylcholine
  5-hydroxytryptamine interaction 463
  quantal release at endplate 86, 104
Acetylcholine nicotinic receptor
  noise analysis 96
  structure and function 98
Actin, neurulation 375
Adenosine-3′,5′-monophosphate, cysteine sulphinate interaction 319
Afterhyperpolarization 25
  Renshaw cells 138
Age, 5-hydroxytryptamine binding sites in brain 417
AIDS, polymyositis 189
Alanine aminotransferase 270
Alzheimer's disease, NMDA receptors 69
γ-Aminobutyric acid, glucose vs. glutamine as precursor 280
γ-Aminobutyric acid transaminase 270, 280
1-Aminocyclobutane-1-carboxylate 56, 59
1-Aminocyclopropane-carboxylate 56
Anamniotes, neuronal excitability, effect of axotomy 20
Anencephaly 377
Angiotensin-converting enzyme inhibitors, cerebral blood flow 80
Aortic nerve-renal sympathetic reflex 337
Arg 659 and 636 68
Arterial baroreceptor reflex 331–361
  cardiac vagal activity 341
  cardiovascular control mechanisms 332
  central mechanisms 338
  descending reticulo spinal pathways 351
  nucleus tractus solitarius 339
  peripheral mechanism 334
  Reis model 338
  ventrolateral medulla 342
Ascorbate in extracellular fluid, voltammetry 300
Aspartate, cysteine sulphinate induced release 317
Aspartate aminotransferase 269
Astrocytes, glutamate utilization 276
Autoregression 127
Axon conduction velocity, effect of axotomy 3
Axotomy 2
  effect on axon conduction velocity 3
  effect on neuronal excitability: discharge patterns 25
  effect on neuronal excitability: electrogenesis 17
  effect on passive membrane properties 11
  reactive deafferentation 30
  target dependence and trophic interactions 34
Azathioprine, polymyositis/dermatomyositis treatment 191

Baroreceptor reflex, arterial 331–361
Basement membranes, proteoglycans 375
Behaviour, 5-HT_1/5-HT_2 receptor interaction 420
Beta-blockers, effect on cerebral blood flow 79
Black widow spider venom, effect on quantal secretion 110, 112
Blood flow, brain
  effect of antihypertensive drugs 77
  microdialysis 203
  regulation 76
Bötzinger complex 431, 434, 436, 439, 445
Brain stem, 5-HT binding sites 415
Branched-chain amino acid transferase 271

Cable analysis 12, 16
Cadmium, induced neural tube defects 395
Calcium channels
  effect of axotomy 29
  effect of 5-HT 458
Calcium inhibitors, effect on cerebral blood flow 81
Campbell's theorem 93, 101, 122
Captopril, effect on cerebral blood flow 80
Carbon dioxide tension, cerebral blood flow 76
Cardiac vagal–arterial baroreceptor reflex 341
Cercal systems 217–243
  cellular interactions in terminal ganglion 227
  CNS-afferent input and the GINs 221
  connections with thoracic motor pathways 230
  escape behaviour 218
  hair types 219
  position and information processing 225
  projections of GINs to brain 237
Cerebral blood flow, effect of antihypertensive drugs 75–83
Chloride, glutamate transport 254
7-Chloro-kynurenic acid 56, 59
Chromatolyzed neurons 2
Chronocoulometry 298
Circadian rhythm, 5-HT binding in brain 405–428
Circulation, role of arterial baroreceptor reflex 333
Clonidine, effect on cerebral blood flow 79
Coeliac disease, polymyositis 189
Compartmentation, brain 203
Conditioning, peristimulus–time histograms 158
Conduction velocity
  axonal morphology 8
  effect of axotomy 3
Cranio-rachischisis 378, 381
Crayfish, axotomy-induced changes in electrogenicity 22, 23
Creatine kinase, polymyositis/dermatomyositis 186
Cross-reinnervation 35
Curly tail 383
Cyanogenic glycosides, induced neural tube defects 394
6-Cyano-7-nitro-quinoxaline-2,3-dione 57, 59, 63
Cyclic voltammetry 298
Cycloleucine 56, 59
Cyclophosphamide, induced neural tube defects 395
Cycloserine 56, 59
Cyclosporine, polymyositis/dermatomyositis treatment 191
Cysteine sulphinate, excitatory amino acid transmitter 313–323
Cytoskeletal proteins, neurulation 375

2-Deoxyglucose, phosphorylation and microdialysis 203
Depression, role of 5-HT 421
Dermatomyositis/polymyositis 181–193
Developmental plasticity, NMDA receptors 65

Development, neural tube defects 363–403
Dialysis membranes 202
Diaschisis 203
Diazoxide, effect on cerebral blood flow 78
6,7-Dichloro-3-hydroxy-2-quinoxaline-2-carboxylic acid 57, 59
Dihydralazine, effect on cerebral blood flow 79
3,4-Dihydroxyphenylacetic acid, in extracellular fluid, voltammetry 300
Diuretics, effect on cerebral blood flow 79
Diurnal variation, 5-HT metabolism in brain 406
Dopamine
  in extracellular fluid, voltammetry 300
  interstitial, microdialysis 207
Dorsal respiratory group neurons 431, 432, 441
Dorsal root ganglion, effect of axotomy on conduction 4

Electrochemical measurements in CNS *in vivo* 297–311
Electrogenesis, effect of axotomy 17
Embryos, neurulation 364
Endothelium derived contracting factor 77
Endplate potential 86
E neurons 434, 436, 445
Environment, neural tube defects 386
Escape behaviour, cercus system 218–243
Excitatory amino acid transmitter, cysteine sulphinate 313–323
Excitatory postsynaptic potentials, Renshaw cells 138
Excitatory synapses, NMDA receptor mediation 63
Exencephaly 377
Extracellular fluid–brain cell microenvironment 299
Extracellular fluid, slow and fast concentration changes, *in vivo* electrochemistry 303

Filiform hairs 219, 220
Flight, cercal systems 230
Fodrin, neurulation 375
Fourier analysis, power spectrum 123
Frequency responses, Renshaw cells 155

Giant interneurons 218
  cellular interactions in terminal ganglia 227
  cercal position and information processing 225
  CNS-afferent input 221
  organization in terminal ganglion 221
  projections to brain 237
Glucose, precursor of glutamate and GABA 280
Glutamate 245–296
  brain concentrations 250
  compartmentation of metabolism 273
  enzymes of metabolism 256
  glucose vs. glutamine as precursor 280
  glycine interactions at NMDA receptor/channel complex 60
  5-HT interaction 463
  interstitial, microdialysis 207
  metabolism in model systems 275
  producing pathways 278
  regulation of metabolism 281
  techniques 246
  transport 252, 255
  utilizing pathways 276
Glutamate decarboxylase 263
Glutamate dehydrogenase 256, 278
Glutamate receptors, neucleus tractus solitarius 341
Glutaminase 259, 279
Glutamine
  concentration in brain 247
  precursor of glutamate and GABA 280
  transport across plasma membrane 248
  transport across mitochondrial membrane 250
Glutamine synthetase 266
Glutamine transaminase 272, 280
Glutathione, glutamate as precursor 272
Glycine, NMDA receptor/channel complex 53–74
  augmentation of EPSPs 66
  binding sites in brain 55
  desensitisation 61
  developmental plasticity 65
  excitatory synapses 63
  glutamate interactions 60
  ligands 57
  long-term potentiation 65
  physiological significance 66
  polyamines 68
Glycosaminoglycans, neurulation 375
G protein, role in 5-HT hyperpolarization 453
GR 38032F 462
Gut, morphogenesis 376

HA-966 56, 59, 61
Hair cell electrical/secretory transfer function 115
Heart, polymyositis/dermatomyositis 186
Hippocampus, 5-HT_1 binding sites 413
Hydralazine, effect on cerebral blood flow 79
5-Hydroxytryptamine
  age-dependence of binding sites 417
  binding sites in brain 407
  effect on calcium channel 458
  depression 421
  diurnal variation of brain levels 406
  induced slow depolarisation 457
  in vivo voltammetry 301
  K conductance 452, 455
  modulation of other transmitter receptors 462
  molecular basis of biological rhythms 422
  Na/K conductances 454, 455
  neuronal excitability 463
  receptors and behaviour 420
  receptor mechanisms 408
  receptor rhythms 411
  receptors in Xenopus oocytes 459
  rest–activity cycle 421
  seasonal effects on 420
5-Hydroxytryptamine 1A receptor 407, 411, 412, 415, 420, 463
5-Hydroxytryptamine 1B receptor 411, 412
5-Hydroxytryptamine 1C receptor 411, 460
5-Hydroxytryptamine 2 receptor 407, 412, 413, 415, 420, 455, 457
5-Hydroxytryptamine 3 receptors 460
5-Hydroxytryptophan, behavioural effects 520
Hyperfrontalism 79
Hypertension
  antihypertensive drugs and cerebral blood flow 75–83
  arterial baroreceptor reflex 332

Hyperthermia, neural tube defects 393
Hypoglycaemia, regulation of glutamate metabolism 282
Hypothalamus, 5-HT_2 binding sites 413

ICS 205–920 462
Ifenprodil, NMDA antagonist 68
Imipramine, binding in brain 416
Immunopathy, polymyositis/dermatomyositis 184
Immunosuppressive drugs, polymyositis/dermatomyositis treatment 191
Inclusion body myositis 182, 186
I neurons 432, 437, 439, 441
Inositol phosphate, cysteine sulphinate interaction 319
Insects, cercal system 217–243
In situ hybridization, glutamate metabolism in brain 246
Interstitial pneumonitis, polymyositis/dermatomyositis 189
Interstitial substance concentrations, microdialysis 195, 200, 204, 207
Ion channels, noise analysis 93
Ion-selective microelectrodes 299
Ischaemia, glutamate in brain 208, 283
IS region, electrogenesis 17

Ketanserin, binding in brain and platelets 408
Kynurenic acid 56, 58

Labyrinthine cyto–neural junction, synaptic activity 114
Lanthanum, effect on quantal secretion 110, 112
Ligand gated channels, noise analysis 96
Light–dark cycle, 5-HT binding sites 411
Locust, cercal system 217–243
Long-term potentiation, NMDA receptor activation 65
Loop-tail, neural tube defect 381

Magnetic field detection in rodents 325–330
Mauther cell 24, 31
MDL 72222 462
Medullary respiratory neurons 429
  respiratory rhythmogenesis 443
  synaptic connections 436
Melatonin, magnetoreception 325
5-Methoxy-*N*,*N*-dimethyltryptamine 420, 453
N-Methyl-D-aspartate receptor/channel complex 53–74
  allosteric interactions of glutamate and glycine binding sites 60
  augmentation of EPSPs 66
  desensitisation 61
  developmental plasticity 65
  excitatory synapses 63
  glycine binding sites 55
  glycine ligands 56, 57
  long-term potentiation 65
  physiological significance 66
  polyamines 68
2-Methyl-5-hydroxytryptamine 462
Microdialysis 195–215
  brain interstitial concentrations 204
  brain microenvironment 203
  dopamine 207
  factors affecting substance collection 200
  glutamate 207, 208
  measurements with 199
  practical aspects 196
Miniature endplate potentials 86, 104
Minimum phase analysis 125
Mitochondria
  glutamate transport 254
  glutamine transport 250
Mixed connective tissue syndrome, polymyositis 189
Motoneurons
  AHPs, effect of axotomy 25
  conduction velocity, effect of axotomy 3
  excitability, effect of axotomy 17
  input resistance 14
  reactive deafferentation 30
  recurrent inhibition 136
  Renshaw cell interactions 141
  respiratory 441
  target dependence 34
Motor activity, cercal connections with thoracic pathways 230
Muscles, polymyositis/dermatomyositis 182
Muscle force, Renshaw cells 174
Myelin sheath thickness, effect of axotomy 6

Nerve growth factor, control of neuronal properties susceptible to axotomy 38
Network oscillator 344
Neural crest 376
Neural tube defects 363–403
  animal model 376
  environmental model 386
  gene–environment interactions 385
  genetic models 378
  neurulation 364
  teratogens 387–395
  sex differences 386
Neurofilaments
  relation to axon caliber 9
  synthesis of and control of conduction velocity 39
Neuromuscular junction, acetylcholine release, noise analysis 104
Neuronal excitability
  discharge patterns, effect of axotomy 25
  electrogenesis, effect of axotomy 17
  effect of 5-HT 463
Neuronal input resistance, effect of axotomy 11
Neurons
  axotomy-induced alterations 1–51
  glutamate utilization 277
Neurotransmitter
  release by nerve stimulation 86
  release, recurrent inhibition 172
Neurulation 364
  associated developmental events 375
  cellular mechanisms 373
  cranio-caudal sequence 366
  molecular basis 373
  primary to secondary 365
Nicotinic acetylcholine receptor
  noise analysis 96
  structure and function 98

Nifedipine, effect on cerebral blood blow 81
Nimodipine, effect on cerebral blood blow 81
Nitroprusside, effect on cerebral blood flow 78
Noise analysis 92, 120
  ion channels 93
  quantal events at high frequency 100
Noradrenaline, effect on Renshaw cells 173
Nucleus tractus solitarius, role in arterial baroreceptor reflex 339

Ornithine aminotransferase 272

Pacemaker neurons 344
Parasympathetic neurons, AHP, effect of axotomy 29
Perfusion fluids, microdialysis 197
Perifascicular atrophy, polymyositis/dermatomyositis 185
Peristimulus–time histograms 158
Phosphate-activated glutaminase 259, 279
Photoreceptor potential, noise analysis 101
Photoreceptors, magnetosensitivity 327
Pigmentation, magnetosensitivity 326, 328
Pineal organ, magnetoreception 325
Plasticity, developmental, NMDA receptors 65
P neurons 433
Poisson statistics 87, 120, 122
Polyamines, augmentation of NMDA receptor/channel activation 68
Polymyositis/dermatomyositis 181–193
  associated diseases 186
  classification 182
  definition 182
  diagnosis 183
  electromyography 186
  etiology 192
  prognosis 191
  symptomatology 182
  treatment 190
Potassium, effect on quantal secretion 112
Potassium conductance
  effect of axotomy 25, 29
  effect of 5-HT 452
Power spectrum 123
Propioceptive feedback, recurrent inhibition 174
Proteoglycans, neurulation 375, 395
Pulmonary disease, polymyositis/dermatomyositis 189

Quantal secretion 87, 104
Quinoxalinediones, glycine antagonists 56, 59
QX-314 22

Reactive deafferentation 30
Recurrent inhibition, Renshaw cells 136, 142, 147
  modulation 171
  saturating characteristics 151
Reis model, arterial baroreceptor reflex 338
Renshaw cells 135–179
  dynamic input–output relations 152, 158
  function 174
  input distribution 142
  intracellular recordings 137
  motoneurone interactions 141
  recurrent inhibition, basic organisation 136
  recurrent inhibition, modulation 171
  static input–output relations 149
Respiratory neurons
  axonal projections 431
  location 431
  rhythmogenesis 443
  subtypes 430
  synaptic connections 436
Rest–activity cycle, 5-HT system 417, 421
Reticulospinal pathways, arterial baroreceptor reflex 351
Retina, magnetoreception 326
Retinoids, induced neural tube defects 393
Rimmed vacuoles, inclusion body myositis 185

Sag conductance 14, 26
Seasons, 5-HT system 419
Self-reinnervation 35
Sensory neurons
  AHPs, effect of axotomy 27
  excitability, effect of axotomy 20
Sex differences, neural tube defects 386
Shot waveform, noise 93, 101, 124
Skin, dermatomyositis 183
SL-82.0715 68
Sleep–waking cycle, 5-HT system 417, 421
Slow depolarisation, 5-HT induced 457
Sodium
  glutamate transport 252
  glutamine transport 249
Sodium channels, soma-dendritic excitability 22
Sodium current, noise analysis 95
Soma-dendritic excitability 17, 22
Spermine, effect on NMDA receptor/channel activation 68
Spider venoms, NMDA antagonists 68
Spina bifida 363
  animal models 378
  gene–environment interactions 385
  teratogens 387–395
Spinal motoneurons
  AHPs, effect of axotomy 25
  excitability, effect of axotomy 17
  target-dependent electrophysiological properties 34
Spinal recurrent inhibition 136, 171
Spiperone
  binding in brain 407
  effect on 5-HT hyperpolarisation 454
Splotch 382
Spreading depression 203
Step responses, Renshaw cells 153
Steroids, polymyositis/dermatomyositis treatment 191
Stochastic approaches to synaptic function 85–133
Stress, 5-HT release 422
Stretch-activated channels 334
Stridulatory motor activity 233
Substance P
  5-HT interaction 458
  effect on Renshaw cells 177
Sulphur-containing amino acids
  biosynthesis 314
  neuronal excitants 313

Sympathetic neurons
AHPs, effect of axotomy 28
excitability, effect of axotomy 20
Synaptic function, stochastic approaches 85–133
ion channels 93
labyrinthine cyto-neural junction 114
neurotransmitter release by nerve stimulation 86
noise analysis 92, 93, 100
photoreceptor potential 101
quantal release of acetylcholine 104
Synaptic transmission, NMDA receptors 63
Synaptosomes
glutamate metabolism 246
glutamate transport 255
glutamate utilization 277

Target dependency, axotomy 34
T-curtailed 384
Teratogen–gene interaction, neural tube defects 385
Teratogens, neural tube defects 387–395
Thorasic motor pathways, cercal connections 230
Trypan blue, induced neural tube defects 395

Vacuolated lens 383
Vagal neurons, arterial baroreceptor reflex 341
Valproic acid, induced neural tube defects 394
Vasopressin, baroreceptor control of secretion 348
Ventral respiratory group neurons 431, 433, 437, 439
Ventrolateral medulla, role in arterial baroreceptor reflex 332, 342
Voltammetry, *in vivo* 297–311

Wave form construction 127
Wind-sensitive cercal systems 217–243

Xenopus oocytes, 5-HT receptors 459
